

Trintek Energy Consulting, Inc.

Trintek Energy Consulting, Inc. was founded in 2003 in Glen Ellyn, IL by President and Principal Consultant T.N. (Tim) Libson.

The company provides project development analysis, and acquisition, investment, and asset management services.

Wind energy-related services includes assistance with:

- Negotiating power purchase agreements and interconnection agreements.
- Economic modeling, project valuation, and project financing.
- Turbine purchases, long-term parts and services, and EPC contracts.

Wind Industry

Libson founded Trintek after realizing his 26 years of experience working for energy companies such as BP-Amoco Corp. and the AES Corp. was transferable to the wind energy industry.

“My experience working in the independent power producer (IPP) industry is similar to the wind energy industry with the primary difference being in power generation technology,” he says.

Consulting Service

Libson’s first consulting assignment was in 2003 for Invenergy LLC’s first wind project, Buffalo Mountain Wind Farm in Anderson, County, TN.

“We create value for our clients and their stakeholders by illustrating how to reduce costs, improve performance, increase value, lower risks, and achieve their organizational objectives,” Libson says.

Libson says his company is committed to providing its clients the services they need to develop or acquire safe, clean, and sustainable renewable energy in the future.

“We want to play our part in moving the country towards a future state, which includes a 20% penetration of renewables into the electric grid over a reasonable time frame,” he adds.

In addition, Libson says the company is considering participation in offshore wind energy development and wants to grow slowly while retaining a focus on quality, response, and value.
